FOR IMMEDIATE RELEASE

**ISCIENCES SHOWCASES ENVIRONMENTAL ANALYSIS RESEARCH TOOLS AT INTERNATIONAL SUMMIT
Ann Arbor-Based Company to Share Expertise at the Global Entrepreneurship Summit**

ANN ARBOR, Mich. (May 30, 2019) – ISciences, a Michigan-based company that provides strategic, scientific and technical consulting services to government, commercial and non-profit clients in the fields of water and climate, corporate sustainability, remote sensing, and human security, has been invited to attend the Global Entrepreneurship Summit 2019 (GES 2019). The summit, described as “an environment that fosters innovation, empowers entrepreneurs, [and] engages investors,” provides opportunities for innovators to connect with other like-minded individuals and entities in the private and government sectors. The Summit takes place between June 3-5 at the Hague, Netherlands and is expected to host nearly 2,000 industry-leading participants from over 120 countries world-wide.

President Thomas Parris, attending on behalf of ISciences, said, “GES 2019 is a great opportunity for ISciences to showcase our innovations for global sustainability to our international peers and potential investors.” The summit, where leaders and representatives from the global community build connections, said Parris, “gives ISciences the opportunity to share the work we do, grow our network, and contribute to the stewardship of the earth’s resources for future generations.”

GES 2019 is the pre-eminent annual entrepreneurship gathering that convenes emerging entrepreneurs, investors, and entrepreneurship supporters from around the world. As such, GES 2019 offers a unique and international platform to bring innovative companies in contact with foreign investors.

ISciences provides strategic, scientific and technical consulting services to government, commercial and non-profit clients in the fields of water and climate, corporate sustainability, remote sensing, and human security. Our contributions influence policy decisions at some of the world’s largest companies and at the highest reaches of government.
